

**Restricted Activity Periods (RAPs) for Fish Species in the
10 Fish Management Zones of Alberta.**

Note: The intent of RAPs is to protect fish, their eggs and juveniles and habitats from harm, through avoidance or full mitigation of any potentially harmful activities. The dates below are the periods during which activities in or along fish-bearing waters are considered high risk for causing harm to specified fish populations. These Restricted Activity Periods apply to all fish-bearing waters as general guidance. Any waterbody-specific RAPs, such as provided by the Alberta *Water Act* Codes of Practice, supersede those shown in the table below. Proponents of activities should plan their work to avoid RAPs. If unable to do so, proponents will be required to collect specific fish habitat and fish data to show the relative location of spawning habitat and activity and presence of fish within and near to the work area, and to use this information to develop a sound plan to avoid harm to fish and habitat.

1 Tullibee is subject to the same Restricted Activity Period as Lake Whitefish.

2 Mooneye is subject to the same Restricted Activity Period as Goldeye.

+ Except for tributaries of the North Saskatchewan and the Beaver/Churchill watershed basins within the NB1, where the RAP is April 16 – Jun30.

Fish Management Zones

Eastern Slopes Zone

- ES1 Oldman / Bow River Watershed
- ES2 Red Deer / North Saskatchewan River Watershed
- ES3 Athabasca / Pembina River Watershed
- ES4 Smoky River Watershed

Northern Boreal Zone

- NB1 Lac La Biche / Beaver River Watershed
- NB2 Athabasca / Lesser Slave River Watershed
- NB3 Peace / Hay River Watershed
- NB4 Athabasca / Slave River Watershed

Parkland Prairie Zone

- PP1 Milk / South Saskatchewan River Watershed
- PP2 Red Deer / North Saskatchewan / Battle River Watershed
